

Scope of Work Template for Consultants

Project/Consultancy Title: STEM II/Consultant to Develop Gender Friendly School Environment Tool
Project Location(s): Kathmandu with Field visit Dhangadi (3 days)

Background:

Supporting the Education of Marginalised Girls in Kailali (STEM II) is a project funded by UKAID under Girls Education Challenges (GEC) programme. The project is led by Mercy Corps and implemented by Backward Society Education with an aim to improve the life chances of marginalised girls in Kailali. The project is undertaken through a series of activities, such as awareness raising campaigns, formation of girls' clubs, teachers' capacity building trainings, school management trainings, infrastructure support to schools, financial literacy classes, and vocational trainings with complementary low interest collateral free loan opportunities. The project works primarily with three categories of girls: (a) those studying in between grades 8 and 10 in 2017, termed as in school (IS) girls; (b) those who have graduated from grade 10 since 2014, termed as school graduates girls (SG); and (c) those who were previously enrolled at secondary level but have dropped out from the school since 2009, termed as out-of-school (OOS) girls.

Purpose / Project Description:

Globally, 31 million primary school going age girls have never been to school. And the majority of these girls come from the poorest and most marginalised communities of the most disadvantaged locations, ethnic groups, etc. In the last two decades, girls' enrolment at the primary level has improved along with boys, but completion rate is low for both sexes. In fact, the varying rate of participation of boys and girls seems to be visible in the secondary level. Significant disparities exist within countries, with the poorest girls from rural areas most severely subject to educational disadvantage - even at the primary level. The GEC is helping the world's poorest girls improve their lives through education by creating supportive school environment and ensuring they receive quality education to transform their future.

Nepal is no exception to this global context relating to the status of girls' education. STEM II project is working with 30 public schools in Kailali to increase learning achievement of IS girls and improve their life chances. It is proved that girls can break the cycle of marginalization provided that they receive conducive educational environment in schools. In this context, the project aims to prepare a document that can be utilized as a guideline for mainstreaming gender in school education improving overall school condition.

Objectives:

The specific objective of the assignment is to:

- Develop a guideline Nepali for creating a gender friendly school environment.

Major Activities:

Scope of Work Template for Consultants
